1 About this guide

This guide is meant to assist all users of the action tracker app to plan and implement the application within the existing HIS framework of either Ministry of Health or individual organisations.

This guide is also tailored for the LINKED Action Tracker app that is fully DEPENDENT on the Bottleneck analysis and the Scorecard applications.

While the guide strives to be complete, there may be certain functionalities topics which have been omitted or which have yet to be documented. This section explains some of the conventions which are used throughout the document.

The Action Tracker App is a browser-based application. In many cases, screenshots have been included for enhanced clarity. Shortcuts to various functionalities are displayed such as Data element “>” Data element group. The “>” symbol indicates that you should click Data element and then click Data element group in the user interface.

Different styles of text have been used to highlight important parts of the text or particular types of text, such as source code. Each of the conventions used in the document are explained below.

Note
A note contains additional information which should be considered or a reference to more information which may be helpful.

Tip
A tip can be a useful piece of advice, such as how to perform a particular task more efficiently.

Important
Important information should not be ignored, and usually indicates something which is required by the application.

Caution
Information contained in these sections should be carefully considered, and if not heeded, could result in unexpected results in analysis, performance, or functionality.

Warning
Information contained in these sections, if not heeded, could result in permanent data loss or affect the overall usability of the system.

Program listings usually contain some type of computer code. They will be displayed with a shaded background and a different font.

Commands will be displayed in bold text, and represent a command which would need to be executed on the operating system or database.

Links to external web sites or cross references will be displayed in blue text, and underlined like this.
2 Dashboard and Demo Server

2.1 Linked Action Tracker Dashboard and Demo server

2.1.1 Introduction to the Action Tracker App

Action Tracker is part of the bottleneck and scorecard cascade that utilizes DHIS2 analytical features to assess national and sub-national level performance of key priority interventions aimed at improving health service delivery and health outcomes. It is a tool that helps improve effective coverage of priority interventions at sub-national level by tracking actions taken to address the root causes of key bottlenecks in the health interventions.

The Action Tracker App is developed and maintained by the HISP Community (University of Oslo (UiO), HISP-Tanzania and HISP Uganda) in collaboration with UNICEF. The Action Tracker v1.0.0.rc.0 is available for download on the [Dhis app store](https://example.com). It is currently compatible with DHIS2 2.28 and above.

![Figure 1.1-A: Standard layout of the Action Tracker dashboard](image)

2.1.2 Advantages of the Action Tracker App

The Action Tracker App helps track the status of key steps taken to address the root causes of key bottlenecks in priority interventions. It is built within DHIS2 along side the BNA, Scorecard and Root Cause analysis Apps allowing systematic analysis, status update and follow up of actions taken to address possible solutions to key bottlenecks in health service delivery.

2.1.3 Rationale for the Linked Action Tracker App

The Linked Action Tracker enables health managers track progress on implementation of actions for proposed solutions and allows for review and follow up of these actions. Following the design of BNA, Scorecard and Root Cause Analysis Apps in DHIS2, it was paramount to design the Action Tracker within DHIS2 to complete the cascade of Bottle Neck Analysis.

**NOTE** Linked Action Tracker App is dependent on BNA app implementation. All actions to be listed on Action Tracker App must be referencing bottlenecks identified using BNA app. You cannot implement Action Tracker App without a BNA app.
2.1.4 Accessing the Linked Action Tracker

This user guide is documented using the Linked Action Tracker App which is available on the DHIS2 demo server. The Action Tracker is set up in the DHIS2 Demo server and with linkages to the BNA, Scorecard and Root Cause Analysis Apps. The current demo server can be accessed on: https://scorecard-dev.dhis2.org/demo/ with the username and password provided on the login page.

![Login and accessing the Action Tracker demo server](image)

*Figure 1.4-A: Logging and accessing the Action Tracker demo server*

The server is hosted in the cloud and can be accessed on the internet via a browser from anywhere as long as there is availability of internet.

2.1.5 Browsing the Action Tracker

To browse the action tracker app, access the DHIS2 demo server with the login credentials provided on the page. Once logged in, search for Action Tracker on the Search bar.

![Search apps or Apps icon to access Apps searching option](image)

*Figure 1.5.-A: Click on Search apps or Apps icon to access Apps searching option*
Figure 1.5.-B: Searching for the Action Tracker App on apps list or by typing full or part of app name “Action Tracker”

Click on the Action Tracker to load the Action Tracker App and once loaded, the user can select the intervention, period, organization unit or modify legend accordingly;

Figure 1.5.-B: Loaded Action Tracker App

2.1.5.1 Selection of an Intervention

The user needs to select the intervention on which bottleneck analysis and root cause analysis were performed and would now like to track actions to improve that particular intervention.

1. Click on the intervention tab to display a list of all available interventions.

2. Click on the intervention for which a bottleneck was identified. This intervention will be selected and displayed to the right.
2.1.5 Browsing the Action Tracker

1. Click update to save the intervention

![Figure 1.5.1-B: List of available interventions for selection](image)

NOTE: Selection of the wrong intervention will not display the Root Cause Analysis data on the Action Tracker.

2.1.5.2 Period Selection

The Action Tracker allows you to make period selections for fixed periods, relative periods and extended relative periods. All period selections types begin with clicking the period tab.

Click on the period tab to display the options

![Period tab](image)

Click on the period type to select the desired type of period; either fixed periods or relative periods
Select the desired period. This will appear to the right

2.1.5.3 Organization Unit Selection

The orgunit selection allows you to select the org unit level for which actions will be tracked. This is the same level for which the root cause analysis was done.

Click on the Org unit tab to access organization unit selection options
Select the desired Orgunit level

Click update to save the selected Orgunit level

NOTE Selection of the wrong organization unit level will not display the Root Cause Analysis data on the Action Tracker

Once the organization unit is selected and saved, data from the root cause analysis table is retrieved and the data entry module activated to allow entry and editing of the action tracker.
The user can modify the legend based on the number of stages for tracking the action status. Currently the Action Tracker has 4 colour codes which indicate the levels through which the actions are tracked; Maroon indicates “Cancelled”, Yellow indicates “In Progress”, Green indicated “Completed”, Red indicates the action was “Not Done.”

Click on the settings icon in the right upper corner to edit the action status settings.

Click on the colour tabs to edit the colours.

Edit the legend to the desired legend name.
2.1.5 Browsing the Action Tracker

Figure 1.5.2-D: Editing legend name

Set default legend by clicking on the pin. The pin will turn green. This will be the legend that appears once you start action tracking.

Figure 1.5.2-E: Setting default legend

Click update to save the changes made to the legend.

Figure 1.5.2-A: Saving changes to legend configurations done

Note:

Access to configuration of legends depends on user’s access roles

2.1.5.5 1.5.3 Mandatory Field Settings Configurations

Click on the settings icon in the right upper corner to edit the Mandatory Fields settings.
Select the mandatory fields that should be displayed on the list during Action tracking.

Check mandatory fields.

Click update to save the changes made to the mandatory fields settings.

Note:

Access to configuration of Mandatory Field Settings depends on user's access roles.
3 Planning, tracking and analyzing actions

3.1 Action Planning in Action Tracker

The action planning section allows you to record actions aimed at addressing the root causes of bottlenecks in the different determinants of health coverage. It provides a description of the actions required to address a specific problem, states the period within which this action should be done, responsible person, status of completion, review date and provides for any review notes.

3.1.1 Action Planning

To access Action Planning option click on Action Planning tab

![Accessing option for adding new action](image)

To access option for adding new action, right click on the intervention on Add Actions column

![Action Tracker form for registering new Action to be tracked](image)

3.1.1.1 Action Description

This field (see Figure 2.1-C above) allows you to describe in detail the specific actions that will be taken to arrive at the proposed solution. The action recorded should be clear and specific. Only one action should be recorded and in case the proposed solution requires more than one, then another action is recorded as indicated in 2.1.B above.

3.1.1.2 Start Date and End Date

These fields (see Figure 2.1-C above) are for the period over which it is anticipated that the action will be performed.
3.1.1.3 Responsible Person and Designation Title

These fields (see Figure 2.1-C above) allow you to record the person who will be responsible for this action and their designation. This is important for follow up and progress of execution of the action.

3.1.1.4 Budget

This field allows you to record the amount of money that has been allocated to execute the action.

3.1.1.5 BNA Target

This field allows you to record the desired value to be attained by this indicator over a given period. This should not be an arbitrary figure, however, it should be derived from approved program targets that were set by the respective program.

Once all the fields on Figure 2.1-C above have been filled, click on "update" to save the information in the action tracker.

![Figure 2.1-D: Saving new Action to be tracked](image)

3.1.1.6 Adding Actions

In cases where the possible solution requires more than one action, additional actions can be added using the add button in the last column to the right (See Figure 2.1-B above). Click the icon to add more actions to the proposed solution. Once the fields are filled, save to continue.
3.1.2 Edit or Delete a Field

To Edit or Delete an entry, right click on any cell for a given intervention and edit or delete an entry accordingly.

![Figure 2.1.6-A: Editing or Deleting actions in the Action Tracker](image)

To edit the action, after clicking edit (Figure 2.1.2-A), update the data entry field where you want to make changes then click save (see Figure 2.1-D above)

To delete the action, after clicking the delete icon (Figure 2.1.2-A), click Yes if you are sure you want to delete action or click No if you don't want to delete the action (Figure 2.1.2-B)

![Figure 2.1.6-B: Deleting action](image)

3.1.2.1 View Indicator Progress

To view the performance of the indicator over a period of time. Click on the chart icon.

![Figure 2.1.7-A: Viewing Indicator Progress](image)
Figure 2.1.7-B: Graph showing indicator progress over time
Hover over the graph points to view more details about the indicator.

Figure 2.1.7-C: Showing details of the indicator
Click on the resize button to view the graph in full screen or to exit the full screen.

Figure 2.1.7-D: Viewing graph in full screen or exiting full screen
Click on the close tab to close the graph.

Figure 2.1.7-E: Closing the Graphical display
3.2 Action Tracking in Action Tracker

The action tracking section allows you to track progress of implementation of the actions and allows users to update the implementation status of the and review. It provides updates of the status of actions; whether they are not done, in progress, completed or cancelled. It allows for comments on selected status and selection of a period when the action will be next reviewed.

3.2.1 Action Tracking

To access the action tracking options, click on the Action Tracking tab.

![Action Tracking Tab](image)

*Figure 3.1-A: Click the Action Tracking to access tracking options*

To update progress on implementation of an action, click on the add button in the reporting period.

![Action Tracking Form](image)

*Figure 3.1-B: Click the Add button to update the status of the action.*

3.2.2 Action Status

To select the action status, click on the drop down arrow to the extreme right under action status to select the current status of the action.

![Action Status Form](image)

*Figure 3.1.1-A: Click on the dropdown to update the status of the action.*

Select the current status of the action from the drop down list.
3.2.3 Action Comments

Type in the Action comments section to provide more description of the selected status.

3.2.4 Review Date

Select the date within the quarter when the action will next be reviewed.
To save the updated action status. Click on the save button.

**Figure 3.1.3-C: Click on the Save button to save the updated action status**

**Note:**

The Save button is only activated when all the fields have been filled.

### 3.2.5 Selecting Columns to be Displayed on the Table

To select columns to be displayed on the action tracking table, click on the list icon in the right corner above the table.
Check the boxes for the columns to be displayed on the table.

**Figure 3.2.A:** Clicking the Add button to update status of the action.

**Note:**

Mandatory columns cannot be unchecked and will always be displayed on the table.

### 3.2.6 Download List of Actions

To download list of actions tracked click on the export icon to get options of formats to download

**Figure 3.3-A:** Accessing action tracking download options
Select the preferred file format to download and follow steps on your browser for saving downloaded files. Available formats for download include CSV, Excel and PDF.

**Figure 3.3-B: Accessing action tracking download options**

### 3.2.7 Filter Actions

This allows one to select and display only actions of a particular status; not done, in progress, completed or cancelled in the table. To filter Actions to display in the table. Click on the status tab at the left upper side of the table.

**Figure 3.4-A: Accessing filter options for action status**

Select the preferred status; not done, in progress, completed or cancelled from the drop down list. This will only display actions of the selected status.
4 Maintenance and Support

4.1 Action Tracker App Maintenance

If the Action Tracker application is taking too long to load, and you’re not on a slow network, make sure you have cleared your browser cache.

Action Tracker Application makes good use of cached files for better offline experience, as a result, when installing higher version, Action Tracker Application may use older version of cached files and thus break down while loading.

4.1.1 5.1 Clearing application cache

Approaches to clear application cache and browser interface vary from browser to browser; for example for Mozilla Firefox the keyboard shortcut is “CTRL+SHIFT+DELETE” while for Google chrome the keyboard shortcut is “CTRL+SHIFT+J”.

Accessing interface for clearing browser cache can be done via the following approaches:

- **Google chrome**: Go to the menu icon on the top right corner, and click it to open, go to more tools menu, and choose “Clear browsing data”. Once the interface is open, Make sure, “Clear the following items from” is set to “The beginning of time”.

- **Mozilla Firefox**: Go to the menu icon on the top right corner, and click it to open, go to ->Library, and go to History, and choose “Clear recent history”. Once the interface is open, Make sure “Time range to clear” is set to “Everything”, and “Details” option is expanded to show all details options. Once on the clear browsing data or recent history, tick “Cache”, “Cookies”, “Hosted app data” or “Offline Website data”. To clear all cached files, cookies and locally stored data by bottleneck.

![Figure 5.1-B: Google chrome interface for clearing browser cache](image)

**Note:**

These will also clear all cache information and cookies from other websites you visited in your browser.

![Figure 5.1-C: Mozilla firefox interface for clearing browser cache](image)
